

Bringing Natural Daylight into Your Home

An abundance of natural light made available for your home through a new production process developed in Germany. This process, called "Anolux-Miro[®]," is an "Optically Enhanced Aluminum," not to be confused with aluminum that is coated with a silver film or is polished. Daylight is reflected down a mirror-like pipe to a translucent ceiling fixture which then diffuses the outside light evenly throughout the room up to 225 sq. ft., even on an overcast or rainy day! The **All-Canadian TUBULAR SKYLITE™**, using this optically enhanced aluminum, puts out the same or more light as the conventional skylight.
